PROFESSIONAL PROFILE

Site Reliability Student Engineer and B.Sc. Computer Science student (GPA: 91.69) at Check Point, specializing in AI-driven automation: building agents and skills and using AI coding tools daily to streamline operations. Prior experience as a DevOps Student Engineer investigating complex infrastructure and cloud incidents across seven cybersecurity products, working directly with customers, Support, and R&D. Former IDF officer, full-stack developer, and geodata analyst in Unit 9900, where I developed operational intelligence tools and led a programming course for 35+ developers.

SKILLS

AI & Automation: AI agents & skills, prompt engineering, workflow automation, GitHub Copilot, Codex, Claude, Claude Code

Development: Python, Flask, JavaScript, HTML, CSS, C, REST APIs, Git

Operations & Reliability: Incident response, escalation management, troubleshooting, monitoring, PagerDuty, Opsgenie

Data & Analysis: Grafana, HAR/log analysis, API responses, GIS, ArcGIS, Pandas

Personal Skills: Leadership, ownership, rapid learning, problem-solving, cross-team communication, working under pressure

EXPERIENCE

Check Point Software Technologies **OCT 2025 – PRESENT**

Site Reliability Student Engineer **SEP 2026 – PRESENT**

- Support the reliability and availability of cloud and infrastructure systems through monitoring, incident response, and troubleshooting.
- Build and use AI agents and skills (GitHub Copilot, Codex, Claude, Claude Code) to automate investigation and operational workflows, streamline processes, and reduce manual work for the team.
- Respond to operational alerts via PagerDuty and Opsgenie, and drive process improvements that increase reliability and team efficiency.

DevOps Student Engineer | *Infrastructure & Cloud Operations* **OCT 2025 – SEP 2026**

- Investigated complex infrastructure and cloud incidents across seven enterprise cybersecurity products, supporting internal teams and external customers; diagnosed authentication, security, and access issues.
- Analyzed HAR files, logger tokens, Tenant IDs, logs, and API responses; translated findings into precise technical escalations that enabled R&D engineers to reach root cause faster.
- Owned incidents end to end, serving as the bridge between customers, Support, and R&D with clear updates through resolution and closure.

IDF – Unit 9900, Israeli Intelligence Corps **FEB 2021 – OCT 2025**

Army Officer, Full-Stack Developer & Geodata Analyst

- Developed full-stack tools (Python, Flask, HTML, CSS, JS) and built and deployed GIS-based intelligence systems supporting operational units.
- Contributed intelligence solutions during major operations ("Operation Guardian of the Walls", "Alot Hashachar", "Operation Iron Swords" and others), providing actionable insights that directly supported field teams and helped save lives.
- Led and instructed a military programming course, training 35+ developers and 7 team leaders.
- Graduated from officer training with focus on leadership, project ownership, and operational innovation.

PROJECTS

Ogdan Mehandesim | *business website for an engineering firm* **MAR 2023 – PRESENT**

- Own the full development lifecycle of a responsive business website, from requirements and UI design through implementation and deployment using Python, Flask, JavaScript, HTML, and CSS.

EDUCATION

Holon Institute of Technology (HIT) – B.Sc. in Computer Science (Evening Program, 3rd year), GPA: 91.69 Graduation: 2027

Unit 9900, Israeli Intelligence Corps – Intensive military programming course (Python & GIS) MAR 2021 – JUN 2021

LANGUAGES & VOLUNTEERING

Languages: English – Fluent • Hebrew – Native

Magen David Adom (MDA) – First aid attendant 2017 – 2020

- Volunteered as a first responder during high school (Grades 10–12); completed advanced training in intensive care ambulance (ALS) and mass casualty events.
